Technical requirements for RFMS subscription-based and hosted systems

General requirements	
High-speed internet connection (Used for procuring RFMS downloads, uploads/downloads from vendors and RFMS remote assistance)	Recommended: wired ethernet connection <ul style="list-style-type: none">• GB network cards, GB switches and Cat 5 cabling at a minimum• Running the computer through an IP phone or running RFMS via wireless networks not recommended due to potential performance issues
Printers	At least one networked or cabled printer
Workstation requirements (Macs and Surface Pro X tablets/computers are not supported)	
Processor	Minimum: Intel Core i5, 8 GB RAM, 7200 RPM SATA hard drive or faster Recommended: Intel Core i7 2.0 GHz or faster, 16 GB or greater RAM, 7200 RPM SATA hard drive
Monitor resolution	Minimum: 1920x1080. Running RFMS at lower resolutions may create screen bleed issues, and all fields or buttons may not be viewable.
Operating system	Microsoft Windows with the most recent updates
Antivirus solution	Choose a solution that is up to date and set to perform regular scans on systems. We recommend that you consult with your IT staff/provider/MSP about best practices for your environment. We recommend a commercial EDR solution over built-in, free or personal solutions. A few examples include: <ul style="list-style-type: none">• sentinelone.com• datto.com/products/datto-edr
Power supply	Recommended: Uninterruptible power supply (UPS) back-up battery unit A simple surge-suppressor is NOT sufficient for protecting your equipment and data.

*RFMS does not have any affiliation with these providers; the list is for example only.
